#### DETAILED ACTION

### Election/Restrictions

Applicant's election of invention I: claims 1-18 in the reply filed on 08/11/2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

# Claim Objections

Claims 1-18 are objected to:

The use of parentheses in the claims to recite alternative features is improper: only reference characters corresponding to elements recited in the detailed description of the drawings and used in conjunction with the recitation of the same element or group of elements in the claims should be enclosed within parentheses so as to avoid confusion with other numbers or characters which may appear in the claims. See MPEP § 608.01(m).

Claim 12, the phrase "the low refractive index" lacks antecedent basis.

Application/Control Number: 10/709,225

Art Unit: 2872

Regarding claim 18, the recitation that the optical elements "can also have the antireflection coating" is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense.

#### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 and 15-18 are rejected under 35

U.S.C. 102(b) as being anticipated by Guha (US 4,281,894).

Guha discloses an optical element comprising,

- (a) a substrate (20 of Fig. 2);
- (b) a first diffraction grating layer (22 of Fig. 2);
- (c) a single uniform layer (24 of Fig. 2), and;
- (d) a second diffraction grating layer (26 of Fig. 2).
- (e) a single or multiple sequences of layers (see Fig.2).

Regarding claim 16, Guha discloses the thickness of the first or second diffraction grating layer and also the

Application/Control Number: 10/709,225

Art Unit: 2872

said uniform layer being either quarter-wavelength or n times quarter-wavelength, wherein n is the integer (Line 52 to line 66 of Col. 1).

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 10-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guha.

Guha discloses the claimed invention except for the particular materials having the particular ranges of the refractive indices of the gratings, the uniform layer or the substrate.

However, such features can be achieved by routine experimentation which does not serve as basis for patentability

It would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize such materials, since it have been held to be

Application/Control Number: 10/709,225

Art Unit: 2872

within the ordinary skill of worker in the art to select a known material on the basis of its suitability for the intended use. One would have been motivated to select such materials so as to achieve maximum diffraction efficiency in the IR range of wavelengths.

Sinclair & Carroll Co. v. Interchemical Corp., 325 U.S. 327, 65 USPQ 297 (1945).

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fayez G. Assaf whose telephone number is (571) 272-2307. The examiner can normally be reached on 8-5 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on (571) 272-2312. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information

Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished
